What makes a sustainable city?

TPO projects

Step 1:

TPO mapping in India, China and North America.

Step 2:

Application for projects to approach the 16 cities and generate opportunities for Nordic Business. 4 MNOK pr. market. 50 % co-financing

Step 3:

Building platform for collaboration between Nordic companies, generating leads, promoting Nordic Solutions, influencing decision makers and ambition level in cities.

Nordic Sustainable cities India

- For phase one, the two Indian cities, Ghaziabad and Panaji have been selected. Ghaziabad is located in North India and Panaji in South India. Furthermore a village in the state of 'Uttar Pradesh' will be selected.
- Through existing ties contact with Ghaziabad has been made. Similarly, close contact with Panaji will ensure a successful collaboration. Urban Goa Lab will be showcased as an example of a successful Indo-Nordic collaboration (Panaji is situated in the state of Goa).
- Half-day workshops are to be conducted in Ghaziabad and Panaji June – July 2018.

Nordic Sustainable cities India

- The mapping of companies and other stakeholders have begun and a Nordic database is being compiled.
- The Municipalities of Panaji and Ghaziabad will participate in a study-tour to the Nordic countries for Indian stakeholders shall take place in September. Nordic Edge 2018 (Stavanger, Norway) has been recommended as one of the events that the delegation shall attend, the trip will also include site visits to the other Nordic countries.
- A challenge is to identify specific projects in Ghaziabad and Panaji. Although some proposed projects have been mapped, many more should follow, as Panaji has received funding under the **SMART CITIES MISSION IN INDIA** and Ghaziabad shall receive funding under **AMRUT** (Atal Mission for Rejuvenation and Urban Transformation).
